This schedule takes static calculations into account and assumes that the floor where the parasol will be placed is perfectly flat and even. If the floor is slightly inclined or uneven, the provided information may not be reliable.

The parasols and their components must be assembled correctly, following the assembly instructions. The schedule is for reference only, as various factors related to the installation area and parasol positioning cannot be predicted. Additionally, unforeseen events such as whirlwinds may occur.

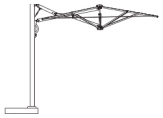

It is crucial to inform both customers and employees responsible for using the parasol that it is not a fixed structure or permanent covering. The parasol should only be opened when in use and under supervision. In case of strong winds or adverse weather conditions, it must be closed.
